DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, **the memory banks as recited in claims 4-5, 11-12 and 18-19** must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that

form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-2, 4-9, 11-16 and 18-25 are, insofar as understood, rejected under 35 U.S.C. 102(b) as being anticipated by Kuge, 6,466,496.

Kuge, 6,466,496, discloses in Fig. 3 a memory system comprising:

Regarding claims 1-2, 5-9, 13-16, 20-22 and 24:

system controller 1 which is read on the memory controller;
system data buses DQ each having a multi-bit structure (see lines 47, column 5) which may be a 32-bit (see lines 60, column 7), therefore, each system data bus must inherently have a width of M bits;
memory modules groups 1000A, 1000B and 1000C;
chip select signals /CS;
wherein: the length of data transmission line/data transmission time is measured for each memory chip and system controller 1 determines set up time/hold time for each memory chip based on the measurement result (see lines 66-67, column 5 and lines 1-3, column 6), therefore, data transmission times between the system controller 1 and each of memory modules 1000A, 100B and 100C can inherently be set up/hold the same;

Regarding claims 4-5, 11-12 and 18-19:

as shown in Fig. 8, memory banks B0-B7;

Regarding claims 23 and 25:

as shown in Fig. 8, data input buffers 60 and 61 (see lines 1-11, column 8).

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
